Nursing Science

Syllabus

Family, child and student health care

Course Code:	KMA326
Course Title:	Family, child and student health care <i>Familje-, barn- och elevhälsovård</i>
Credits:	15
Degree Level:	Master's level
Progressive Specialisation:	Second cycle, has only first-cycle course/s as entry requirements (A1N)

Major Field of Study:

Course Approval

The syllabus was approved by the Faculty of Health, Science and Technology 2022-02-03, and is valid from the Autumn semester 2022 at Karlstad University.

Prerequisites

Nursing licence issued by the National Board of Health and Welfare. Nursing degree of at least 180 ECTS credits including a degree project of at least 15 ECTS credits or a Bachelor degree in nursing (including a degree project of at least 15 ECTS credits), or equivalent, plus at least 24 months of full-time work experience as a licensed nurse, plus upper secondary level Swedish 3 or Swedish as a second language 3 and English 6.

Learning Outcomes

Upon completion of the course, students should be able to:

- give an account of the normal physical and mental development of children and adolescents in order to discern deviations,
- identify, assess, plan, conduct and evaluate nursing interventions in cases of common somatic conditions in children and adolescents, in consultation with the guardian,
- identify, assess, plan, conduct and evaluate nursing interventions in cases of common

- psychiatric conditions in children and adolescents, in consultation with the guardian,
- give an account of and argue for vaccinations and vaccination programmes for children and adolescents in relation to current legislation,
 - give an account of the meaning of the concepts habilitation, rehabilitation and functional impairment in children and adolescents,
 - identify functional impairment in children and adolescents and assess the need for habilitation and rehabilitation measures,
 - perform CPR on children,
 - give an account of and give arguments for the UN convention on the child's rights in relation to health and ill health, and diversity,
 - plan the organisation and scope of child health care and health care in school based on current evidence and legislation,
 - give an account of and distinguish between the roles of the school nurse and the children's health care nurse in the interprofessional team,*
 - plan, conduct and evaluate health examinations and vaccinations independently,*
 - identify and prevent health problems, health risks and risk environments frequented by children, adolescents, and families,*
 - plan and conduct health instruction independently,*
 - demonstrate ability to take a professional approach to family, children and adolescents.*

* Learning outcomes assessed during the clinical placement period

Content

The course integrates nursing (5 ECTS cr) and medical science (10 ECTS cr) on campus and in the virtual learning environment. Instruction is in the form of lectures, individual study, group work, seminars, and clinical placement (6 weeks).

Different somatic and psychiatric disorders and health risks among children and adolescents are treated, along with appropriate interventions and treatments. Functional impairment and development disorders as well as neuropsychiatric conditions are studied along with rehabilitation and child habilitation. Students also study support interventions for children, adolescents and families with special needs in conjunction with other actors. The UN convention on the rights of the child is treated in relation to sustainable social development and health equity among children and adolescents.

The role of the primary care nurse in health promotion among families, children and adolescents is treated in relation to current regulations. Areas in public health and preventive care are treated in relation to the national public health objectives, with a special focus on health problems, risk environments and risk behaviour. During their clinical placement, students study the work and patient-oriented leadership of the primary care nurse in relation to the organisation of child healthcare and the school health care team, and develop their professional approach to and independence in the professional role.

The learning outcomes related to the clinical placement and the component CPR for children are assessed Pass (G) or Fail (U).

Reading List

See separate document.

Examination

Assessment is based on an individual written e-examination, a group report discussed in a seminar, CPR for children on a doll, an individual written take-home exam, and performance during the clinical placement. The clinical placement involves mandatory attendance, and independence is highlighted.

The number of assessment opportunities for the clinical placement is limited to two. Students who have failed to earn a Pass grade for the clinical placement are offered a second opportunity as soon as circumstances permit.

The examiner may decide that a student who is very close to a passing grade can complete a supplementary assignment to receive a passing grade for a specific examination. Additional examination material must be submitted within six days of notification. The supplementary assignment only is then assessed in accordance with the assessment criteria, and if it is insufficient, a grade of fail (U) will be given.

If students have a decision from Karlstad University entitling them to Targeted Study Support due to a documented disability, the examiner has the right to give such students an adapted examination or to examine them in a different manner.

Grades

One of the grades Distinction (VG), Pass (G), or Fail (U) is awarded in the examination of the course.

Quality Assurance

Follow-up relating to learning conditions and goal-fulfilment takes place both during and upon completion of the course in order to ensure continuous improvement. Course evaluation is partly based on student views and experiences obtained in accordance with current regulations and partly on other data and documentation. Students will be informed of the result of the evaluation and of any measures to be taken.

Course Certificate

A course certificate will be provided upon request.

Additional information

The local regulations for studies at the Bachelor and Master levels at Karlstad University stipulate the obligations and rights of students and staff.

A student who, in the examiner's judgement, will fail to obtain a Pass grade for the practical placement component on the grounds of grave and unprofessional skills and conduct that may cause injury may be required to immediately discontinue the practical training. As stipulated in the Higher Education Act Chapter 4, sect. 6, SFS 1992: 1434, and Regulations of Student Expulsion from Higher Education SFS 2007: 989, a student who suffers from mental disorder, abuses alcohol or drugs, or has been guilty of a serious offence endangering others or valuable property can be expelled until further notice. In such a case, the Rector files a complaint to the Expulsion Board of Higher Education, which investigates the matter and makes a decision. A decision of expulsion shall always entail that the student must discontinue the education until further notice. The Expulsion Board of Higher Education is responsible for all Swedish higher education institutions.
