

Faculty of Health, Science and Technology
Mechanical Engineering

Syllabus

Machine Design for Master Students in Engineering Science

Course Code:	MSGC32
Course Title:	Machine Design for Master Students in Engineering Science <i>Konstruktionsteknik för civilingenjörer</i>
Credits:	7.5
Degree Level:	Undergraduate level
Progressive Specialisation:	First cycle, has less than 60 credits in first-cycle course/s as entry requirements (G1F)

Major Field of Study:
MTA (Mechanical Engineering)

Course Approval

The syllabus was approved by the Faculty of Health, Science and Technology 2019-03-14, and is valid from the Autumn semester 2019 at Karlstad University.

Prerequisites

Mechanics, 7.5 ECTS credits, Solid Mechanics, 7.5 ECTS credits, Materials Engineering, 7.5 ECTS credits, and Machine Components, 7.5 ECTS credits, or equivalent

Learning Outcomes

The aim of the course is that students acquire knowledge of mechanical engineering and design in the subareas of design methodology, solid modelling, and drawing.

Upon completion of the course, students should be able to:

Construction

- give an account of the main aspects of a product development process,

- give an account of the relationships between form, material, and manufacturing process,
- give an account of basic design support methods,
- independently structure, plan, and complete a design assignment on the basis of a given specification of requirements, including the selection of materials and manufacturing methods, and
- use relevant assumptions and simplifications to calculate a design.

Solid modelling and drawing

- model and edit parts and compilations in a 3D CAD program,
- create 2D drawings of details and compilations in a 3D CAD program,
- structure variant constructions using family tables and relations in a 3D CAD program, and
- structure more complex constructions using top-down functions in a 3D CAD program.

Content

Basic knowledge of the course content is acquired through lectures, course reading, and supervised exercises in solid modelling and drawing, both manually and in a 3D CAD program, and later applied in one or several group construction assignments presented in seminars where students discuss the solutions of different groups.

Reading List

See separate document.

Examination

Assessment is based on hand-in assignments and mandatory seminars.

If students have a decision from Karlstad University entitling them to special pedagogical support due to a documented disability, the examiner has the right to give such students an adapted examination or to examine them in a different manner.

Grades

One of the grades Distinction (VG), Pass (G), or Fail (U) is awarded in the examination of the course.

Quality Assurance

Follow-up relating to learning conditions and goal-fulfilment takes place both during and upon completion of the course in order to ensure continuous improvement. Course evaluation is partly based on student views and experiences obtained in accordance with current regulations and partly on other data and documentation. Students will be informed of the result of the evaluation and of any measures to be taken.

Course Certificate

A course certificate will be provided upon request.

Additional information

The local regulations for studies at the Bachelor and Master levels at Karlstad University stipulate the obligations and rights of students and staff.
