

Faculty of Health, Science and Technology
Geo-Science

Syllabus

GIS III, Data input to GIS

Course Code:

NGGB44

Course Title:

GIS III, Data input to GIS

GIS III, Indata till GIS

Credits:

7.5

Degree Level:

Undergraduate level

Progressive

First cycle, has less than 60 credits in first-cycle course/s as entry requirements (G1F)

Specialisation:

NGA (Physical Geography)

Major Field of Study:

NGA (Physical Geography)

Course Approval

The syllabus was approved by the Faculty of Health, Science and Technology 2018-02-14, and is valid from the Autumn semester 2018 at Karlstad University.

Prerequisites

At least 25 ECTS cr completed for the BSc programme in Surveying Technology and Geographical IT (TGLIT) and at least 25 ECTS cr completed for the Surveying and Mapping programme (TGMKT), of which 4 ECTS cr completed for the course GIS I, 7.5 ECTS cr, and 1.5 ECTS cr for the course GIS II, or equivalent.

Learning Outcomes

Competence and skills

Upon completion of the course, students should be able to:

- independently identify, formulate and handle issues in the GIS field,
- analyse and evaluate different technical solutions in an overall perspective,
- plan and carry out tasks with adequate methods on the basis of their own time frames,
- model, simulate and evaluate the steps in a project,
- give an account of and discuss information, problems and solutions in dialogue with different groups orally and in writing,
- apply tools for data validation in a geographic database,
- create and evaluate workflows for geographic data manipulation, and
- handle the design, maintenance and special adaptation of GIS

Judgement and approach

Upon completion of the course, students should be able to:

- identify their need of further knowledge and continua updating of knowledge,
- critically review and evaluate their own and the works of others,
- communicate their result at a defence seminar,
- review a fellow-student's project.

Content

The course provides training in database modelling based on a requirement specification. Students work in groups. On the basis of this design, students construct a geographic database for storage of given objects. Hands-on computer sessions with specific software are included. The course includes managing data format problems, data in different coordinate systems and topology requirements for geographic objects.

The final storage environment is a database with attributive domains and subtypes created for quality control of database content. Students' various database constructions are evaluated and discussed in final seminars.

Instruction is in the form of lectures, lab work, and supervision.

Reading List

See separate document.

Examination

Assessment is based on an individual, written report, presented and discussed in seminar, seminar peer reviewing, and oral presentation of group project. Participation in laboratory work and supervision is mandatory.

Grades

One of the grades 5 (Pass with Distinction), 4 (Pass with some Distinction), 3 (Pass), or Fail (U) is awarded in the examination of the course.

Quality Assurance

Follow-up relating to learning conditions and goal-fulfilment takes place both during and upon completion of the course in order to ensure continuous improvement. Course evaluation is partly based on student views and experiences obtained in accordance with current regulations and partly on other data and documentation. Students will be informed of the result of the evaluation and of any measures to be taken.

Course Certificate

A course certificate will be provided upon request.

Additional information

The local regulations for studies at the Bachelor and Master levels at Karlstad University stipulate the obligations and rights of students and staff.

Required course for the engineering programme Surveying Technology and Geographical IT (TGLIT).
