Learning Outcomes

Upon completion of the course, students should be able to:

- problematise and explain the assumptions of research theories and methods in depth as well as their suitability for different types of research issues,
- apply adequate research methods to a research project linked to school activities and quality assurance,
- critically review, assess and make research ethical decisions in relation to choice of method, theory, data processing, analysis and the presentation of results,
- analyse and abstract empirical data and present results based on such an analysis,
- critically review and assess the reliability of research results and analysis, and
- relate their research results to relevant national and international research fields.

Content

The aim of the course is that students develop further understanding of research methods and their theoretical basis and apply theories and methods to an empirical study regarding learning, teaching and/or leadership.

The course has a focus on the ontological and epistemological basis of research methods and a problematisation of research issues, operationalisation and a selection of data collection methods. Different perspectives on data analysis are treated and tested practically. Research ethical issues as well as issues of validity and reliability are treated throughout the course.

Reading List
