Results of learning

All in all, the course was valuable for me.

Courses that were considered valuable were related to personal development, acquisition of new knowledge and skills, understanding of something. Higher ratings can refer to students' perceived development (learned a lot, and it was useful). Lower ratings can refer to scanty development of knowledge and skills or not understanding certain themes or their parts, not understanding the necessity and significance of the course, problems in the learning environment.

How likely would you be to recommend this course to a friend or colleague?

Net Promoter Score (NPS) = 100

Promoters = 1 (100%)

Passives = 0 (0%)

Detractors = 0 (0%)

The Net Promoter Score (NPS) is a metric that measures student experience and predicts the effectiveness of a course. It calculates an NPS score based on a key question using a 0-10 scale, asking how likely students would recommend the course to others. Respondents are grouped into Promoters, Passives, or Detractors based on their score, and the NPS is calculated by subtracting the percentage of Detractors from the percentage of Promoters. The NPS is a core metric for course evaluation programs and is trusted by educational institutions to engage their students and improve their learning experience performance.

Comments

Course supervisor's comments

ENAS04 had two registered and active students, of whom one responded to the course evaluation survey. This student was overall very satisfied with the course with the exception of workload. However, the student did not leave any comments explaining what was lacking about the workload (e.g., too much, too little, too evenly distributed). In practice, workload mainly comes down to the agreed upon tasks between supervisor and student during the semester. Outside of the survey, both students who were registered on the course have commented informally that they enjoyed the course and found it useful to develop their skills and insights into linguistics research in practice.
