

Kursanalys

Kurskod MTAD10 7,5 hp, HT12

MTAD 10 Materials in industrial applications

Students – CivEng students, exchange students, totally 10 answered the course evaluation questions.

The course was generally graded 4 of maximum 5 points.

The course will be changed in 2013 to adopt to students studying at 3 year, before the course was dedicated to 4-th year of education students. New course book will be suggested so that this course will better correlate to previous course in Materials engineering background. The course will contain also preparation of compendium where students can work in groups getting deeper knowledge in the selected classes of materials. Compendium part was highly evaluated by students in previous year as useful way of learning so we will continue it. Based on the first evaluations, efficiency of the course will be estimated and necessary changes will be done accordingly.
