

Fakulteten för hälsa, natur- och teknikvetenskap

Kursanalys

Kursanalysen ska genomföras inom 3 veckor efter avslutad kurs. Lämnas till prefekt eller den som prefekt delegerar till.

OBS! För kurser inom lärutbildningen och lärarlyftet används speciellt framtagna enkäter. Administreras av lärutbildningen kansli.

Förändringar till detta kurstillfälle

Förändringar som planerats och genomförts sedan föregående kurstillfälles kursanalys

New course book was used so that this course will better correlate to previous course in Materials engineering background. The course contained preparation of compendium where students worked in groups getting deeper knowledge in the selected classes of materials. Compendium part was highly evaluated by students in previous year as useful way of learning so we will continue it. This time, questions in the compendium were partially revised for the new content.

Detta kurstillfälle, uppföljning**Studenternas synpunkter och sammanfattning av resultatet från kursvärdering (enkät eller muntlig):**

The students evaluated the course content positively, most have a good impression of the course and thought that the learning outcomes were fulfilled completely or to a large degree. Some negative comments were on structure of the course, compendium questions and 3 of 10 mentioned that oral exam was more difficult than usual written exam.

It was mentioned that some more course literature would be better, Google was mentioned as not best choice for the information search.

Den kursansvarige lärarens egna synpunkter och kommentarer på kursvärderingen:

This was first time when students were from 3-rd year of education only. It was not easy to see their average background level and confidence in information search and sorting out (although students mentioned that they had a library class and know how search systems and databases work).

Förslag till förändringar inför nästa kurstillfälle och förväntad effekt

Structure of the course will be changed so that students have time for compendium questions not after but between theoretical classes – to improve involvement and give better chance to ask questions and work them through.

One more course book, the ASM handbook will be recommended for the class as a relevant and strong information source, will be available in electronic version through the library web page. Internet sources should be prioritized third after recommended course book and additional handbook.

Compendium questions will be revised for the new structure and content and agreed better to the recommended literature.
