

Kursanalys

Kurskod MTAD18 7,5 hp, HT12

MTAD 18 Characterization of materials

Students – CivEng students, 3 exchange students, totally 10 answered the course evaluation questions.

The course was generally graded 3-4 of maximum 5 points.

Students liked course lectures and good atmosphere in the class. Once again, a study visit to Uddeholms AB where students could see how scientific equipment used in a real factory was mentioned specially good. Otherwise, in dependence on background some parts of the course were graded more or less complicated and interesting. For French students seminars involving students' group work were not very common, they used to see a teacher explaining exercises instead. Students mentioned that to have several teachers involving in the same course is interesting and also underlined that demonstration classes were interesting – not only theory but some practice.

To have high course quality and improve it, we plan to keep visiting industry in a form of study visit. Main problem – course literature is difficult to solve, but attempts to find a suitable book will be done.
